Machine Learning for Vision-Based Motion Analysis: Theory and Techniques (Advances in Computer Vision and Pattern Recognition)

Techniques of vision-based motion analysis aim to detect, track, identify, and generally understand the behavior of objects in image sequences. With the growth of video data in a wide range of applications from visual surveillance to human-machine interfaces, the ability to automatically analyze and understand object motions from video footage is of increasing importance. Among the latest developments in this field is the application of statistical machine learning algorithms for object tracking, activity modeling, and recognition.

Developed from expert contributions to the first and second International Workshop on Machine Learning for Vision-Based Motion Analysis, this important text/reference highlights the latest algorithms and systems for robust and effective vision-based motion understanding from a machine learning perspective.

Highlighting the benefits of collaboration between the communities of object motion understanding and machine learning, the book discusses the most active forefronts of research, including current challenges and potential future directions.

Topics and features: provides a comprehensive review of the latest developments in vision-based motion analysis, presenting numerous case studies on state-of-the-art learning algorithms; examines algorithms for clustering and segmentation, and manifold learning for dynamical models; describes the theory behind mixed-state statistical models, with a focus on mixed-state Markov models that take into account spatial and temporal interaction; discusses object tracking in surveillance image streams, discriminative multiple target tracking, and guidewire tracking in fluoroscopy; explores issues of modeling for saliency detection, human gait modeling, modeling of extremely crowded scenes, and behavior modeling from video surveillance data; investigates methods for automatic recognition of gestures in Sign Language, and human action recognition from small training sets.

Researchers, professional engineers, and graduate students in computer vision, pattern recognition and machine learning, will all find this text an accessible survey of machine learning techniques for vision-based motion analysis. The book will also be of interest to all who work with specific vision applications, such as surveillance, sport event analysis, healthcare, video conferencing, and motion video indexing and retrieval.

From reader reviews:

Alfredo Dunn:

Book is to be different for every single grade. Book for children until adult are different content. As we know that book is very important usually. The book Machine Learning for Vision-Based Motion Analysis: Theory and Techniques (Advances in Computer Vision and Pattern Recognition) ended up being making you to know about other expertise and of course you can take more information. It is quite advantages for you. The reserve Machine Learning for Vision-Based Motion Analysis: Theory and Techniques (Advances in Computer Vision and Pattern Recognition) is not only giving you a lot more new information but also to get your friend when you truly feel bored. You can spend your own personal spend time to read your guide. Try to make relationship with all the book Machine Learning for Vision-Based Motion Analysis: Theory and Techniques (Advances in Computer Vision and Pattern Recognition). You never feel lose out for everything in the event you read some books.

Christine Andrews:

Reading a guide can be one of a lot of exercise that everyone in the world likes. Do you like reading book therefore. There are a lot of reasons why people like it. First reading a guide will give you a lot of new info. When you read a book you will get new information simply because book is one of a number of ways to share the information as well as their idea. Second, examining a book will make anyone more imaginative. When you studying a book especially fictional book the author will bring you to imagine the story how the characters do it anything. Third, you are able to share your knowledge to other folks. When you read this Machine Learning for Vision-Based Motion Analysis: Theory and Techniques (Advances in Computer Vision and Pattern Recognition), you could tells your family, friends as well as soon about yours e-book. Your knowledge can inspire the others, make them reading a e-book.

Jacob Gray:

A lot of people always spent their particular free time to vacation as well as go to the outside with them family members or their friend. Are you aware? Many a lot of people spent many people free time just watching TV, or even playing video games all day long. If you need to try to find a new activity that's look different you can read some sort of book. It is really fun in your case. If you enjoy the book that you simply read you can spent all day every day to reading a book. The book Machine Learning for Vision-Based Motion Analysis: Theory and Techniques (Advances in Computer Vision and Pattern Recognition) it is rather good to read. There are a lot of people who recommended this book. We were holding enjoying reading this book. When you did not have enough space to create this book you can buy the actual e-book. You can m0ore very easily to read this book through your smart phone. The price is not very costly but this book offers high quality.

Gigi Brown:

Reading a book for being new life style in this yr; every people loves to read a book. When you go through a book you can get a lot of benefit. When you read publications, you can improve your knowledge, due to the fact book has a lot of information into it. The information that you will get depend on what types of book that you have read. If you want to get information about your study, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, this sort of us novel, comics, and soon. The Machine Learning for Vision-Based Motion Analysis: Theory and Techniques (Advances in Computer Vision and Pattern Recognition) will give you new experience in reading through a book.
