Autobiologies: Charles Darwin and the Natural History of the Self Alexis Harley

What does heredity mean for identity? What role does the individual have in shaping a personal or a human history? What is the ethical status of seemingly biologically determined behaviours? What does individual death mean in the light of species extinction? *Autobiologies* explores the importance of such questions in Victorian life writing. Analysing memoirs, diaries, letters, and natural histories Alexis Harley demonstrates how theories of natural selection shaped nineteenth-century autobiographical practices and refashioned the human subject—and also how the lived experience of the individual theorist simultaneously impacted their biological formulations.
